

What Parents Should Know About

GoGuardian[®] protects your children online.

GoGuardian software helps educators maximize the benefits of using technology in the classroom while minimizing the risks associated with online learning. We created GoGuardian for Admins[™] to help schools comply with federal laws such as CIPA* (Child Internet Protection Act), and to provide school administrators with better control over how their technology is being used for learning.

Features include:

Safer Searching

Administrators can easily prevent students from searching for (or seeing) inappropriate material.

YouTube Filtering

Allows teachers and administrators greater control over which videos students see.

Online Monitoring

Schools have the option to protect and oversee student web activity both on and off campus.

Activity Flagging

Helps schools detect potentially dangerous activity, such as self-harm or bullying.

Theft Recovery

Helps authorized school administrators find and recover stolen Chromebooks.

Education Insights

Usage analytics help educators better understand what's working.

Student privacy is extremely important to GoGuardian; we will never sell or share any personal information to unauthorized parties.

Still have questions?

Contact your school administrator for more information, or email us:
Privacy Team: privacy@goguardian.com | Website: www.goguardian.com

*GoGuardian for Admins can help schools comply with federal regulations when fully implemented.
